# Teacher Manual

## Running, watching and marking your exams

For subject teachers. You get your own login and a dashboard that shows only your exams: watch students live, review evidence, give extra time, hand out passwords, and produce marks.

ExamProctor · Version 1.0
October 2026

# Contents

Read sections 1 to 4 before your first exam. Section 5 is your guide during the exam, and section 7 covers marking and clean-up.

# 1 What you can do

ExamProctor lets students take a **written** exam (a Google Form) and/or a **practical** exam on their own computers while the system records evidence in the background. As the teacher you watch, decide, and mark. You never have to touch the server.

**You can**

- See every student of your exam live
- Read a student's timeline, screenshots and webcam photos
- Give a student extra time
- End a student's attempt, or let them restart
- Move a student on to the practical part
- Give students passwords
- Change your exam's schedule and settings
- Download results and build a marks sheet
- Archive an exam and delete its screenshots

**An administrator does**

- Creates exams and assigns them to you
- Sets each exam's batch
- Adds students and moves them between batches
- Creates your login
- Looks after the server and email

Ask your administrator if something in this list needs changing.

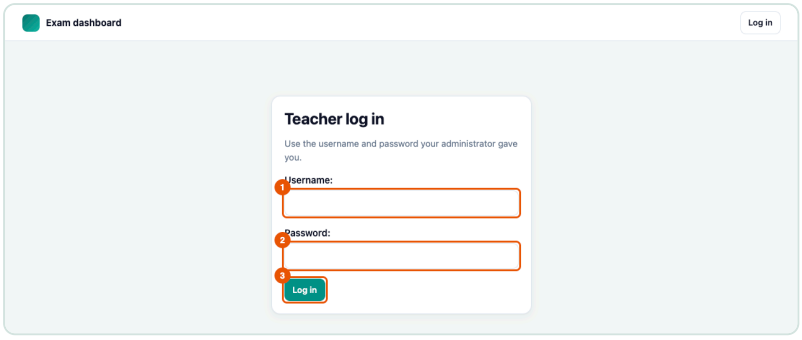

## Three ideas that make everything easier

| Idea | Meaning |
|---|---|
| **Batch** | Every exam belongs to exactly one batch (for example 81). Only students of that batch see it. |
| **Part** | An exam has a written part, a practical part, or both. With both, it is always written first, then practical. |
| **Flag** | A traffic light per student: **clean**, **review** or **flagged**. It is a guide to who to look at first. **It never changes anyone's marks by itself.** |

# 2 Logging in

1. Open the teacher address your administrator gave you (it ends in `/teacher/`).

2. Type your **username** and **password**, then press **Log in**.
3. When you finish, press **Log out** at the top right.

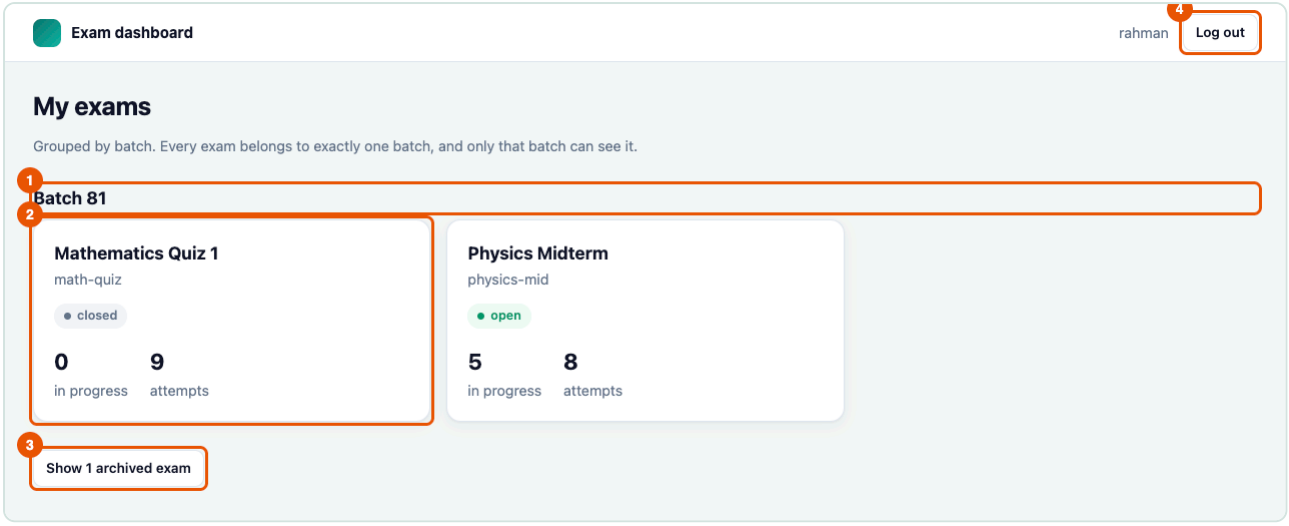

The teacher login page

1. Username
2. Password
3. Log in

- Five wrong passwords lock your username for 15 minutes. Wait, or ask the administrator.
- If you forgot your password, the administrator can set a new one.
- The page tells you if your session has expired; just log in again.

# 3 Your exams

After logging in you see your exams, grouped by batch. Click an exam to open its live monitor.

My exams

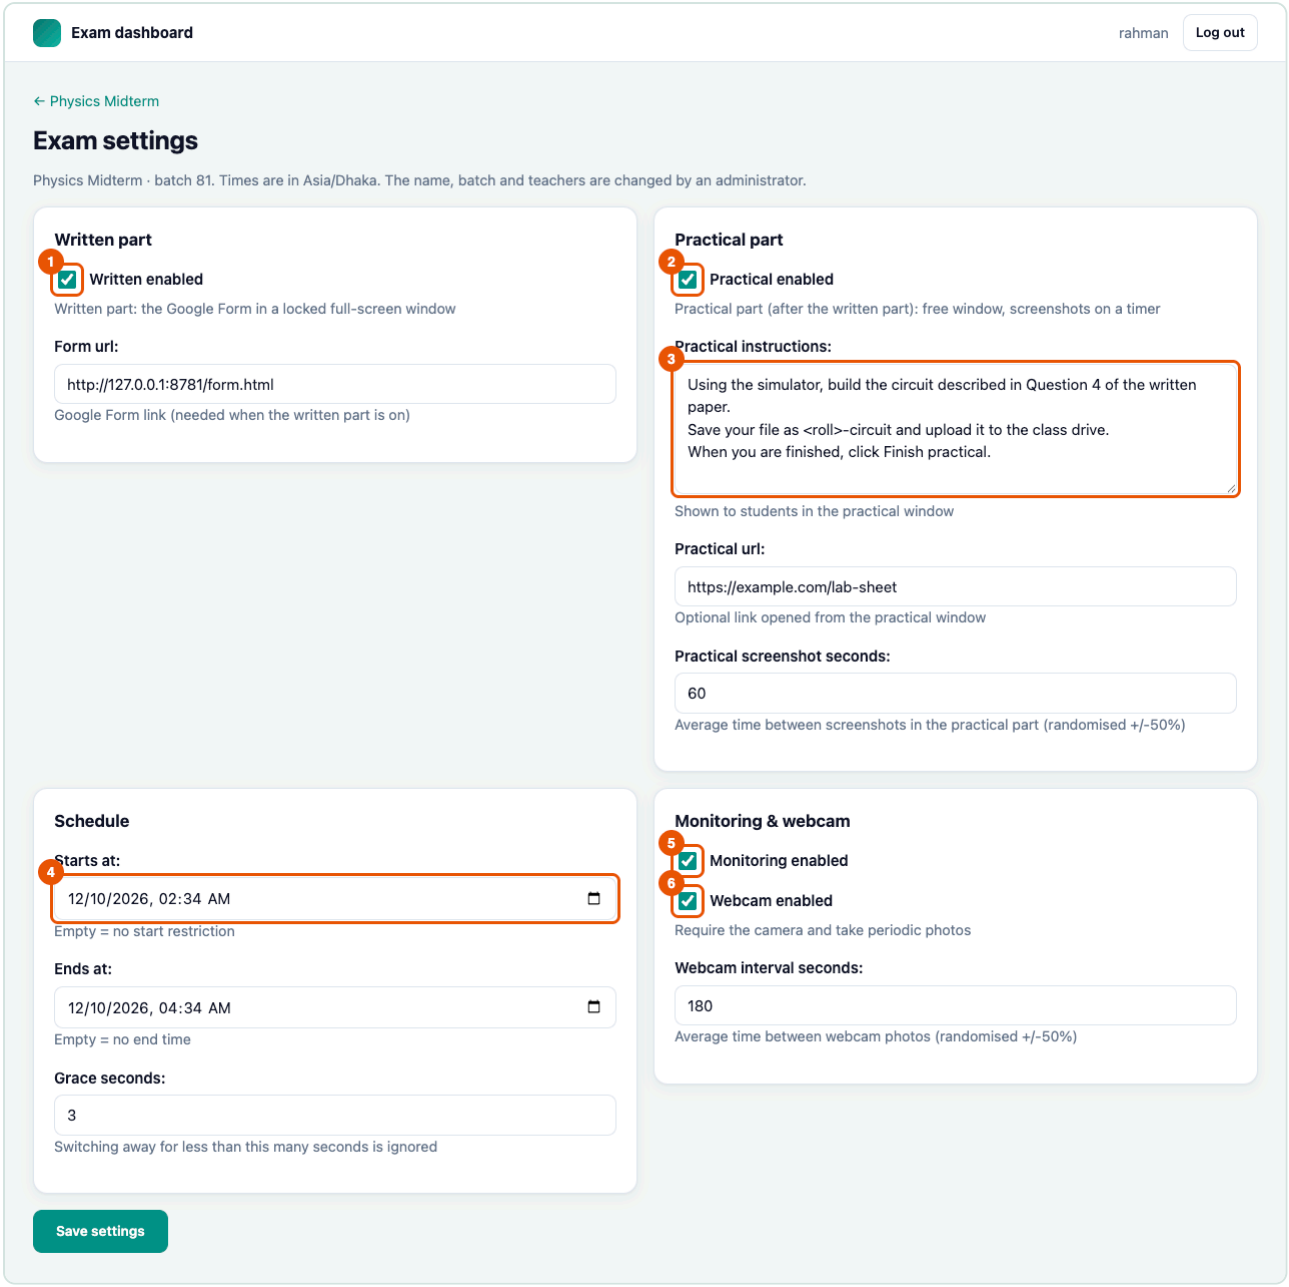

1. Exams are grouped under their **batch**.
2. Each card shows the exam's status (open, upcoming, ended), how many students are in progress, and how many have attempted it.
3. Finished exams you have archived are tucked away here; click to show them.
4. Log out.

> **Warning group**
> An exam under **No batch set** is invisible to students. Ask the administrator to set its batch.

# 4 Before the exam

## 1. Check the exam settings

Open the exam, then **Exam settings**. You can change everything below; the name, batch and teacher list belong to the administrator.

Exam settings

1. **Written part**: the Google Form in a locked, full-screen window.
2. **Practical part**: after the written part, a free window with a timer and your instructions.
3. **Practical instructions**: what students must do. Add an optional link below.
4. **Starts at / Ends at**: when students may start, and when every window closes. Times are in the server's time zone (shown at the top).
5. **Monitoring**: the master switch for the rules and screenshots.
6. **Webcam**: require a camera and take photos every N seconds (on average).

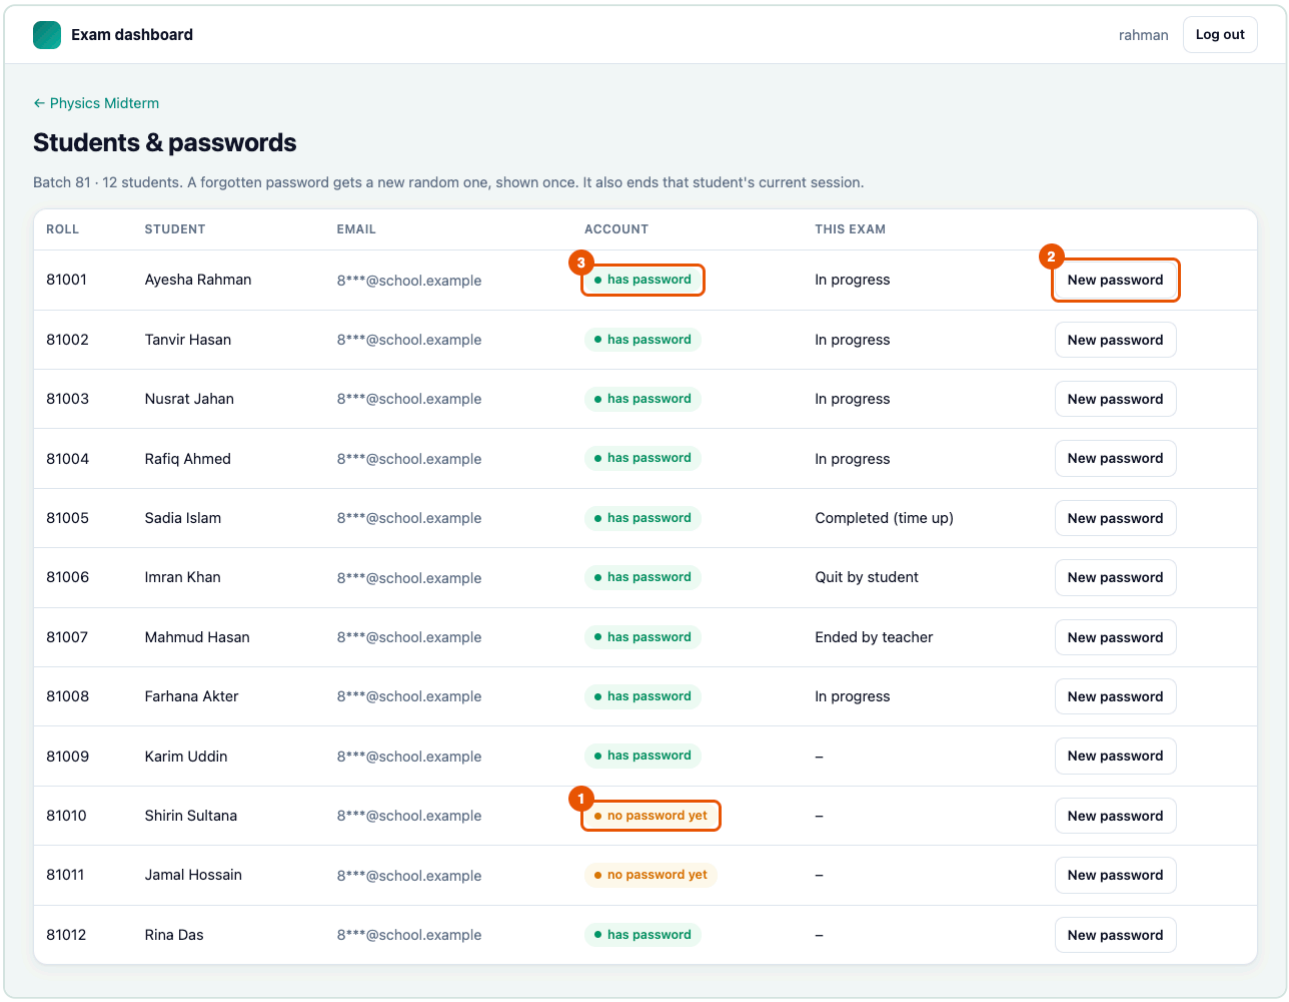

| Setting | Recommended |
|---|---|
| Grace seconds | 3 (switching away for less than this is ignored). |
| Webcam interval | 180 seconds (a photo about every three minutes, at random times). |

| Setting | Recommended |
|---|---|
| Practical screenshots | 60 seconds (about one screenshot a minute). |
| Ends at | Always set it, so the exam closes by itself. You can give individual students extra time later. |

> **Saving**
>
> Press **Save settings**. Students' apps pick up changes within about two minutes.

## 2. Make sure every student has a password

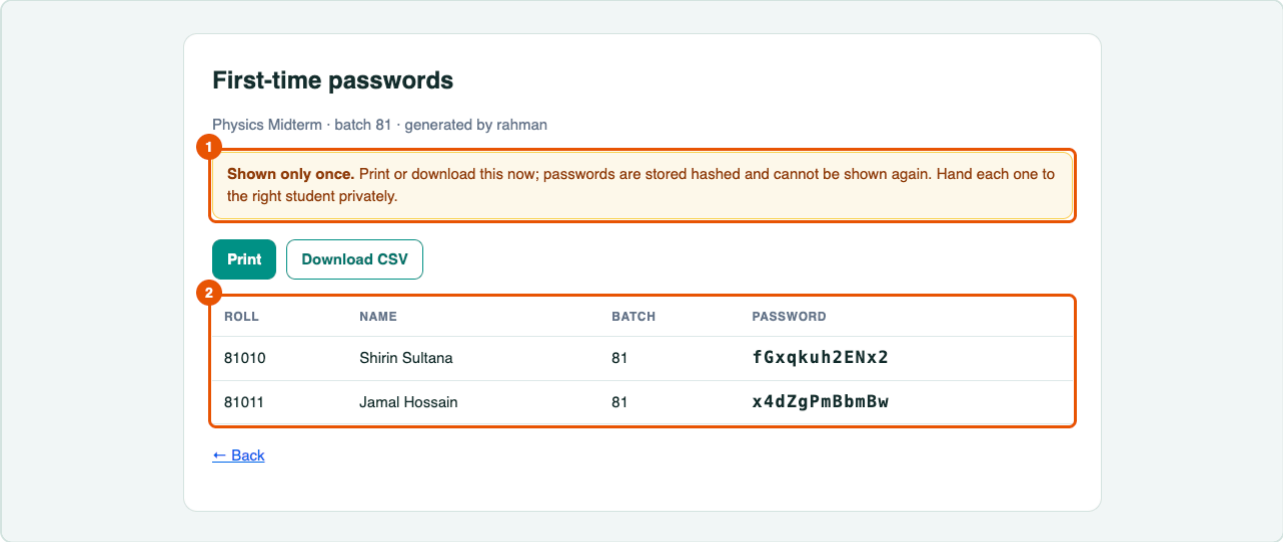

Open **Students & passwords** to see everyone in the exam's batch.

Students and passwords

1. **no password yet**: this student cannot log in until they get one.
2. **New password**: gives that one student a new random password (use for a forgotten password). Their old one stops working and any current session ends.
3. **has password**: nothing to do.

To give a password to **everyone who has none**, go back to the live monitor and press **First-time passwords (batch N)**. A one-time sheet appears:

The one-time password sheet

1. It is shown only once. Print it or download the CSV now.
2. Each student's own random password. Cut the page into slips and hand each over privately.

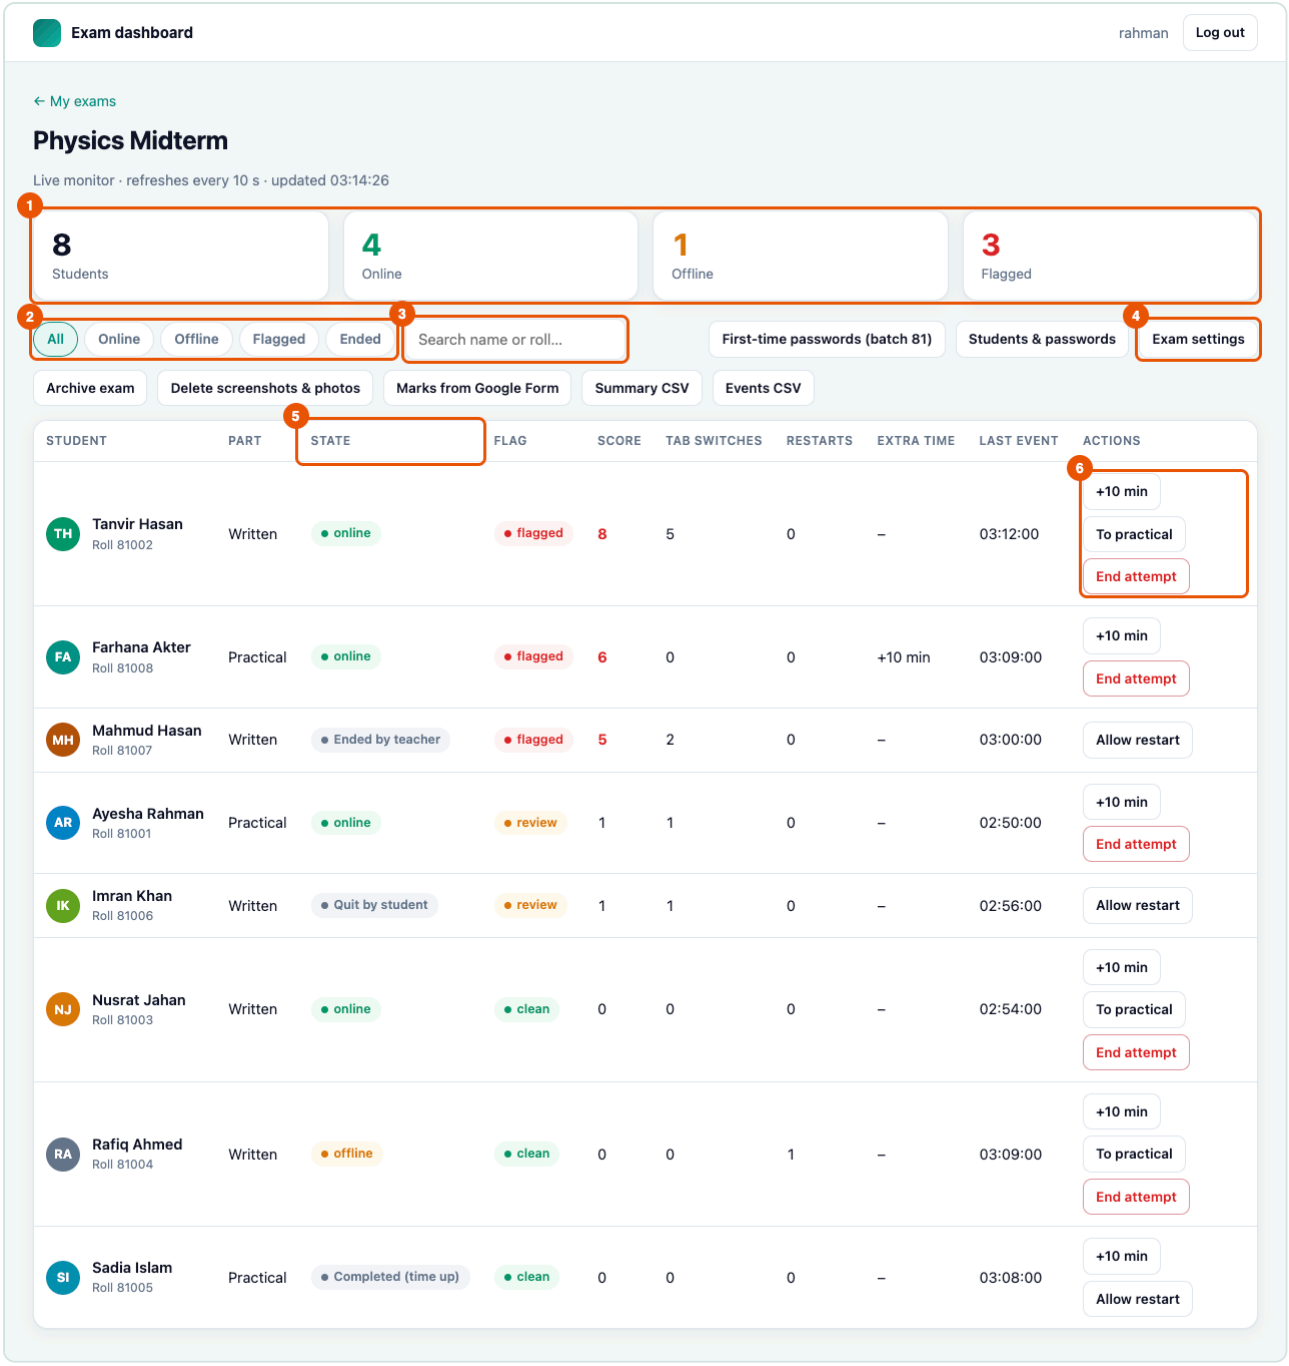

> **Shown only once**
> Passwords are stored only as hashes. If a sheet is lost, use **New password** per student. Never give a whole batch the same password.

### 3. Tell the students

- They install the app (the Student Manual has every step, including the macOS permissions).
- They need Screen Recording permission, and a working camera if you turned the webcam on.
- The written part needs **one screen** and no screen-sharing, remote-access or recording tools.
- Leaving the exam window, copying and pasting, and opening developer tools are blocked or recorded.

## 5 During the exam: the live monitor

Open your exam to see the live monitor. It refreshes every 10 seconds on its own.

The live monitor

1. **Summary**: students, how many are online, offline, and flagged.
2. **Filters**: show everyone, only online, offline, flagged or ended students.
3. **Search** by name or roll number.
4. **Toolbar**: settings, students and passwords, marks, CSV downloads, archive.
5. **State**: online (the app reported in the last 90 seconds), offline, or how the attempt ended.
6. **Actions** for each student (below).

## Reading a row

| Column | Meaning |
|---|---|
| Part | Written or practical: where the student is now. |
| State | **online**: the app is running and connected. **offline**: no signal for 90 seconds (internet problem, closed laptop, app closed). **ended**: finished, quit, ran out of time or ended by you. |
| Flag and Score | Points from the events (see the table below). 0 is clean, 1 to 4 is **review**, 5 or more is **flagged**. |
| Tab switches | How many times the student left the exam window for longer than the grace seconds. |
| Restarts | How many times the student reopened the exam (a crash or restart). Restarts do **not** add to the score. |
| Extra time | Minutes you gave this student. |
| Last event | When something was last recorded for the student. |

## What the buttons do

| Button | When to use it | Effect |
|---|---|---|
| **+10 min** | A student lost time (crash, power cut, internet). | Adds 10 minutes to **that student only** (repeatable, up to 480). Also reopens a student whose time had just run out. Their app picks it up within about two minutes. |
| **To practical** | A student finished the form but the app did not move on. | Moves them to the practical part. Their app switches within two minutes. |
| **End attempt** | You must stop a student (misconduct, wrong person). | Ends the attempt, closes their window within about 30 seconds and blocks re-entry. Logged with your name. |
| **Allow restart** | A student quit by mistake, or you ended one wrongly. | Deletes the attempt so they can start again. |

## What the events mean

| Event | What happened | Points |
|---|---|---|
| Switched away from exam | The student left the exam window (after the grace period). | 1 |
| Tried to copy/paste | Copy, cut or paste was blocked. | 1 |

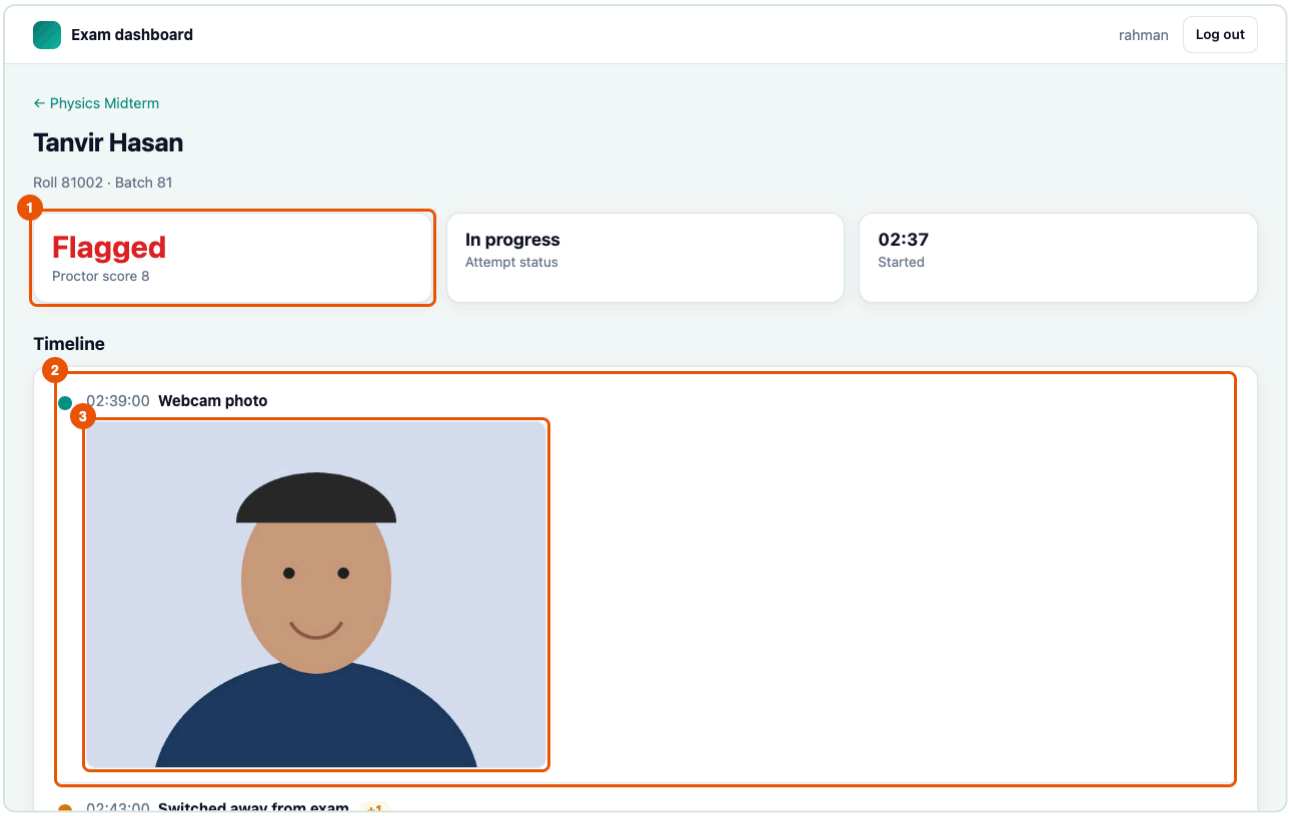

| Event | What happened | Points |
|---|---|---|
| Blocked shortcut | Print, save or view-source was blocked. | 1 |
| Tried to leave the exam page | A link outside the form's site was blocked. | 1 |
| Left full screen | The student exited full-screen mode (it is put back). | 2 |
| Tried to open developer tools | F12 or the inspect shortcut was blocked. | 2 |
| Camera unavailable or covered | The webcam failed, was covered or in use. | 2 |
| Screenshot could not be taken | Screen Recording permission is off or capturing failed. | 1 |
| Extra display connected | A second monitor was plugged in during the written part. | 3 |
| Screen-share / remote / recording app | OBS, TeamViewer, AnyDesk, Parsec or similar was running. | 3 |
| Chat / meeting app running | Zoom, Discord, Teams and similar (only noted). | 1 |
| Connection lost / restored, Reopened the exam, Time ran out, Finished, Submitted the written part | Information only. | 0 |

## Situations during the exam

| You see | What it usually means | What to do |
|---|---|---|
| A student turns **offline** | Wi-Fi dropped, laptop lid closed or app closed. | Wait. Their app keeps everything and sends it when it reconnects. If they lost time, press **+10 min**. |
| A student says "it crashed" | They can log in again and continue in the same part. | Nothing. Their restart count goes up. Give **+10 min** if they lost time. |
| A student quit by mistake | Quitting is final. | Press **Allow restart**. |
| Flagged student | Several violations. | Open their timeline (next section) before deciding anything. |
| Student cannot log in | No password or forgot it. | **Students & passwords**, then **New password**. |

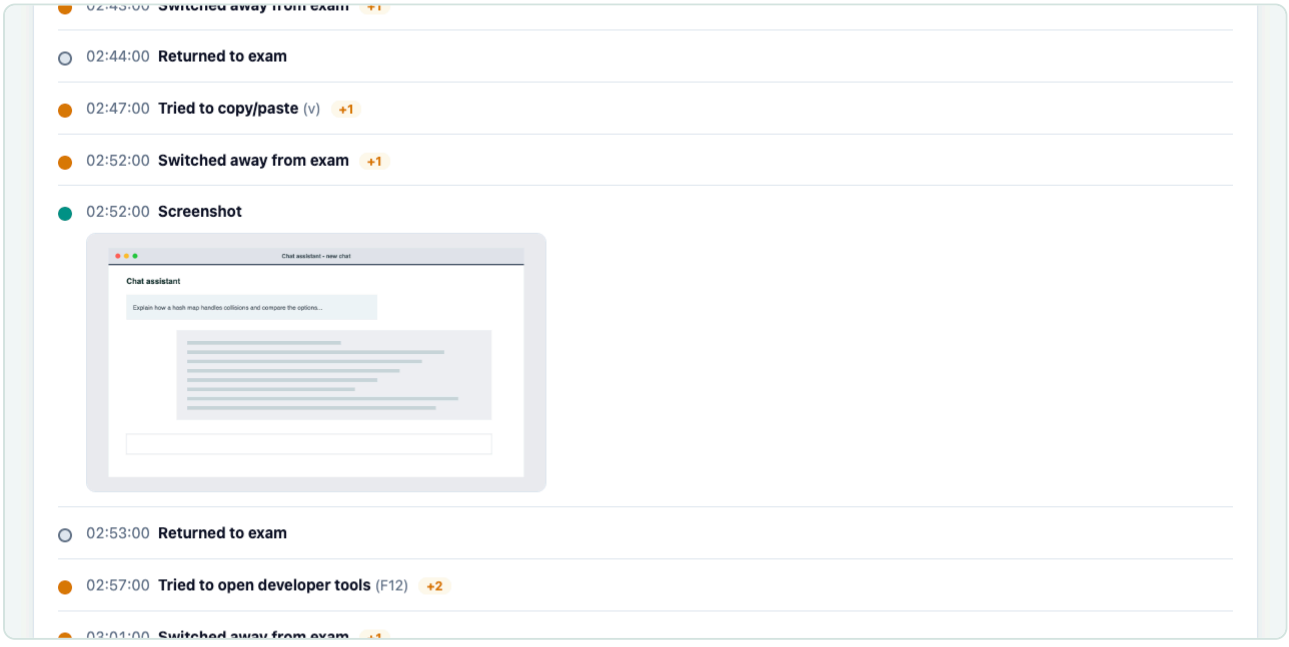

# 6 Reviewing a student

Click a student's name on the monitor to see everything recorded for them, in time order.

A flagged student's timeline (top)

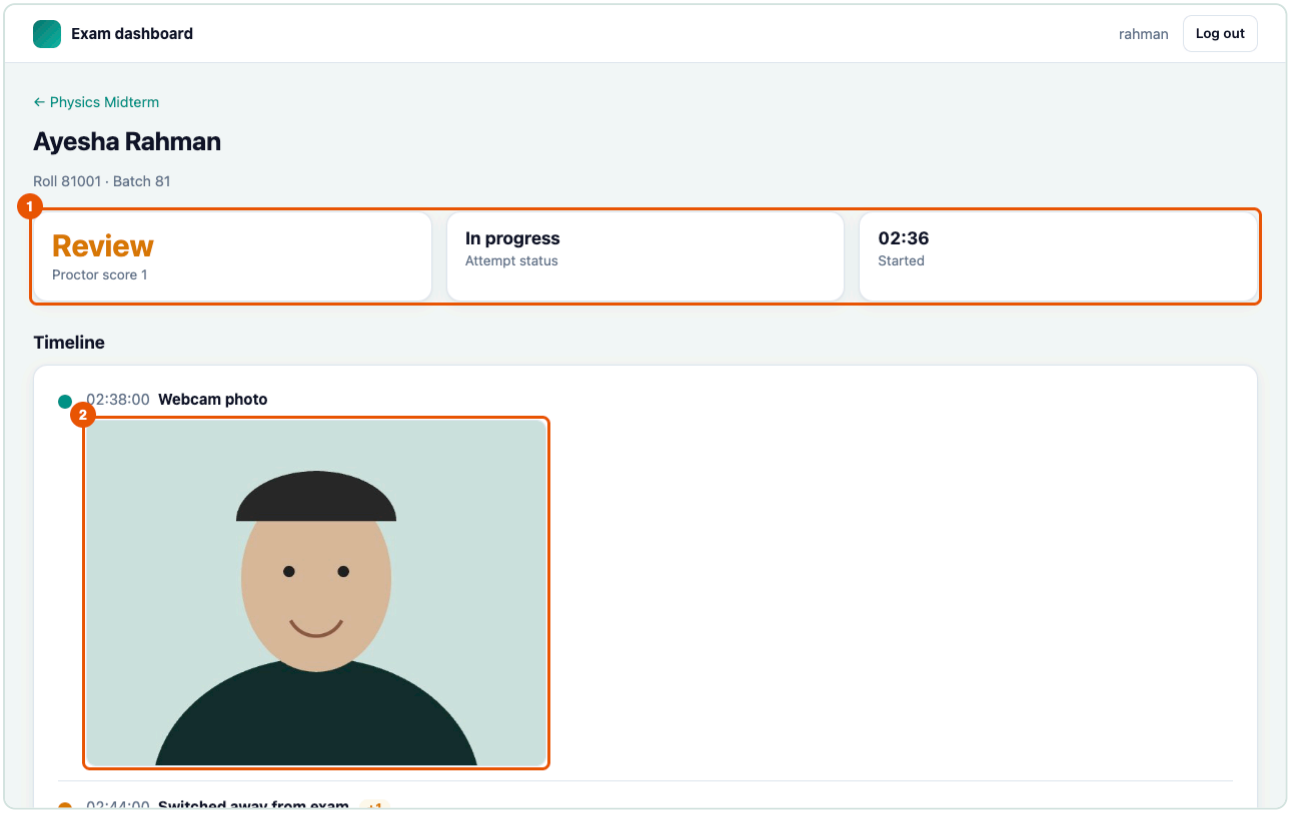

1. The flag and the points behind it.
2. Each event with its time; orange dots add points.
3. Webcam photos and screenshots appear in sequence with the events.

The same timeline, further down: events and the screenshot taken when the student left the exam window

### Reading it fairly

- A screenshot is taken when a student **leaves the exam window** (after the grace period), so it shows what they switched to.
- **Connection lost**, **restarts** and **reopened** are not violations. Computers crash.
- Webcam photos come at random times; a covered or missing camera is recorded, but one bad photo is not proof of anything.
- Look at the pattern (many switches, blocked apps, an extra screen) rather than at a single event.

A practical-part timeline: the student advanced to practical; webcam photos and screenshots arrive on a timer

1. Status and score
2. Webcam photos and sampled screenshots

# 7 Practical exams

In the practical part the student works in **their own apps** (a simulator, a spreadsheet, a code editor). Switching windows is normal, so it is **not** counted as a violation.

| | Written part | Practical part |
|---|---|---|
| Student's window | Google Form, locked and full screen | A small normal window with the timer and your instructions |

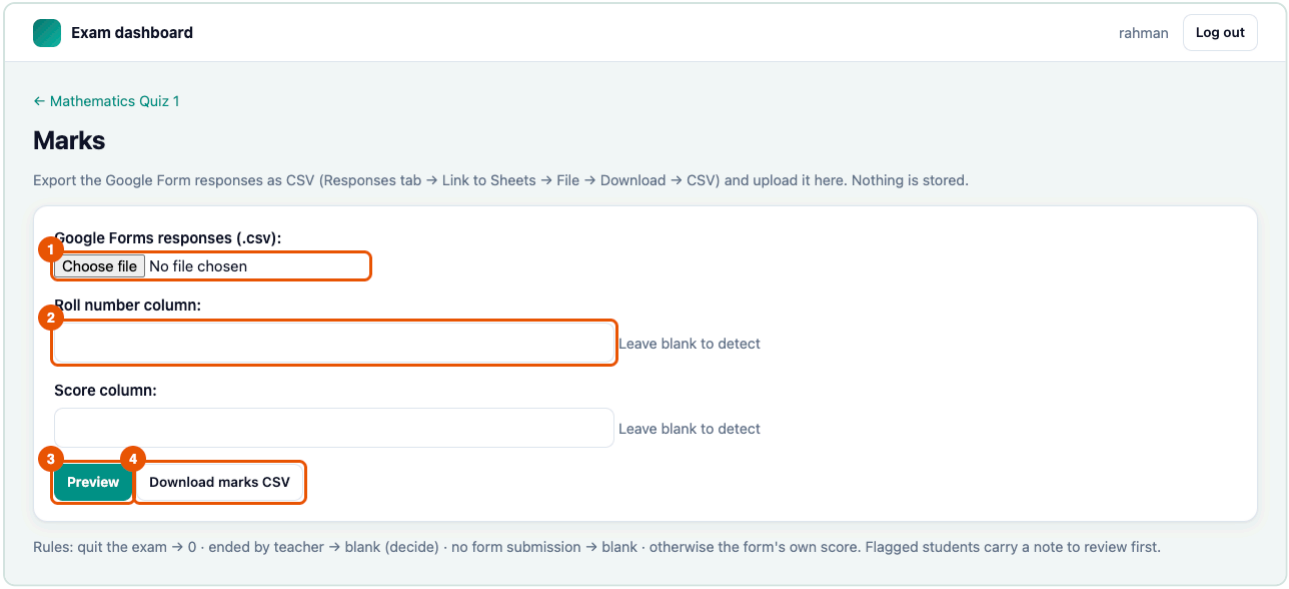

| | Written part | Practical part |
|---|---|---|
| Switching apps | Recorded, with a screenshot and a warning when they return | Allowed, nothing recorded |
| Screenshots | When the student leaves the window | Every ~60 seconds, wherever they work |
| Second monitor | Not allowed (blocks the start) | Allowed, noted |
| Still active | Blocked apps, webcam, heartbeat, extra time, offline protection | Blocked apps, webcam, heartbeat, extra time, offline protection |

- Set the **practical instructions** (and an optional link) in Exam settings. Students see them in their practical window.
- Marks for practical work are decided by you, from the screenshots and the timeline. The marks tool works with the Google Form part.
- If a student is stuck in the written part, **To practical** moves them on.

# 8 After the exam

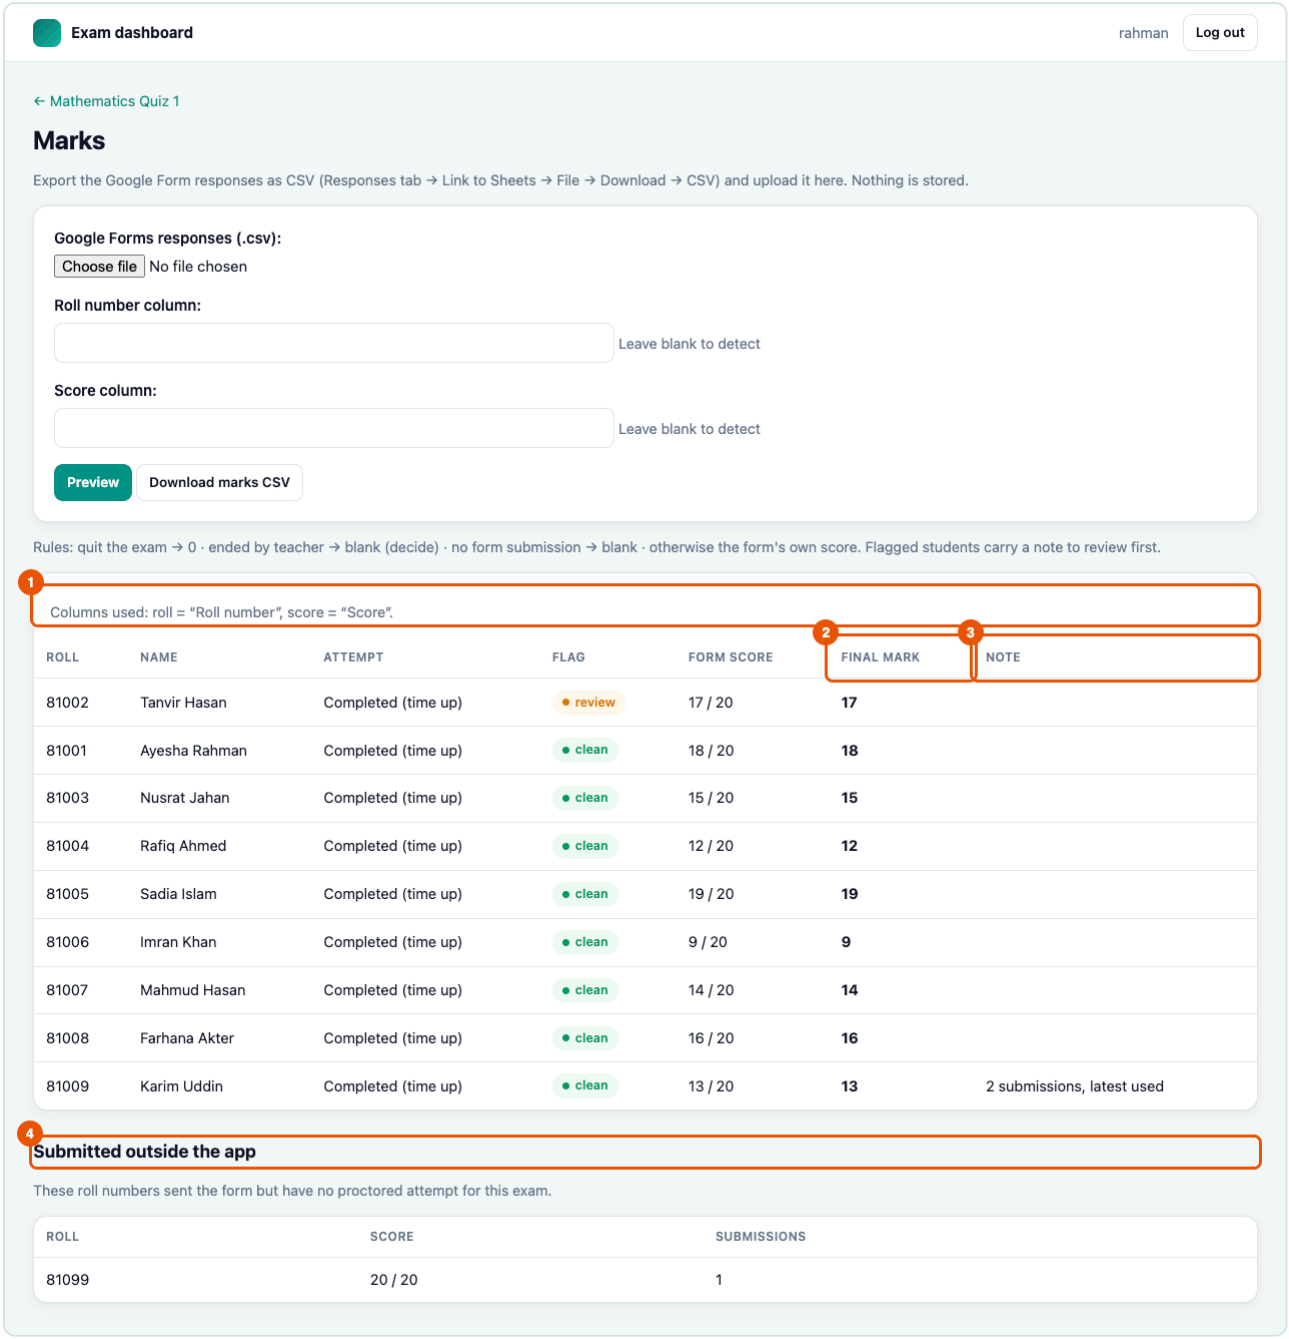

## Marks from the Google Form

1. In Google Forms open **Responses**, then use the Sheets link and **Download as CSV**.
2. In the live monitor press **Marks from Google Form**.
3. Choose the CSV. Leave the column names empty to detect them (the roll number and score columns), or type them.
4. Press **Preview** to check, then **Download marks CSV** for the final sheet. Nothing you upload is stored.

Upload the responses

1. The CSV file
2. Optional: the roll number column's name
3. Preview
4. Download the marks sheet

The marks preview

1. Which columns were used to match students.
2. **Final mark**: the form score, or 0 / blank by the rules below.
3. **Note**: why (quit, flagged, several submissions...).
4. Roll numbers that submitted the form **without** using the app.

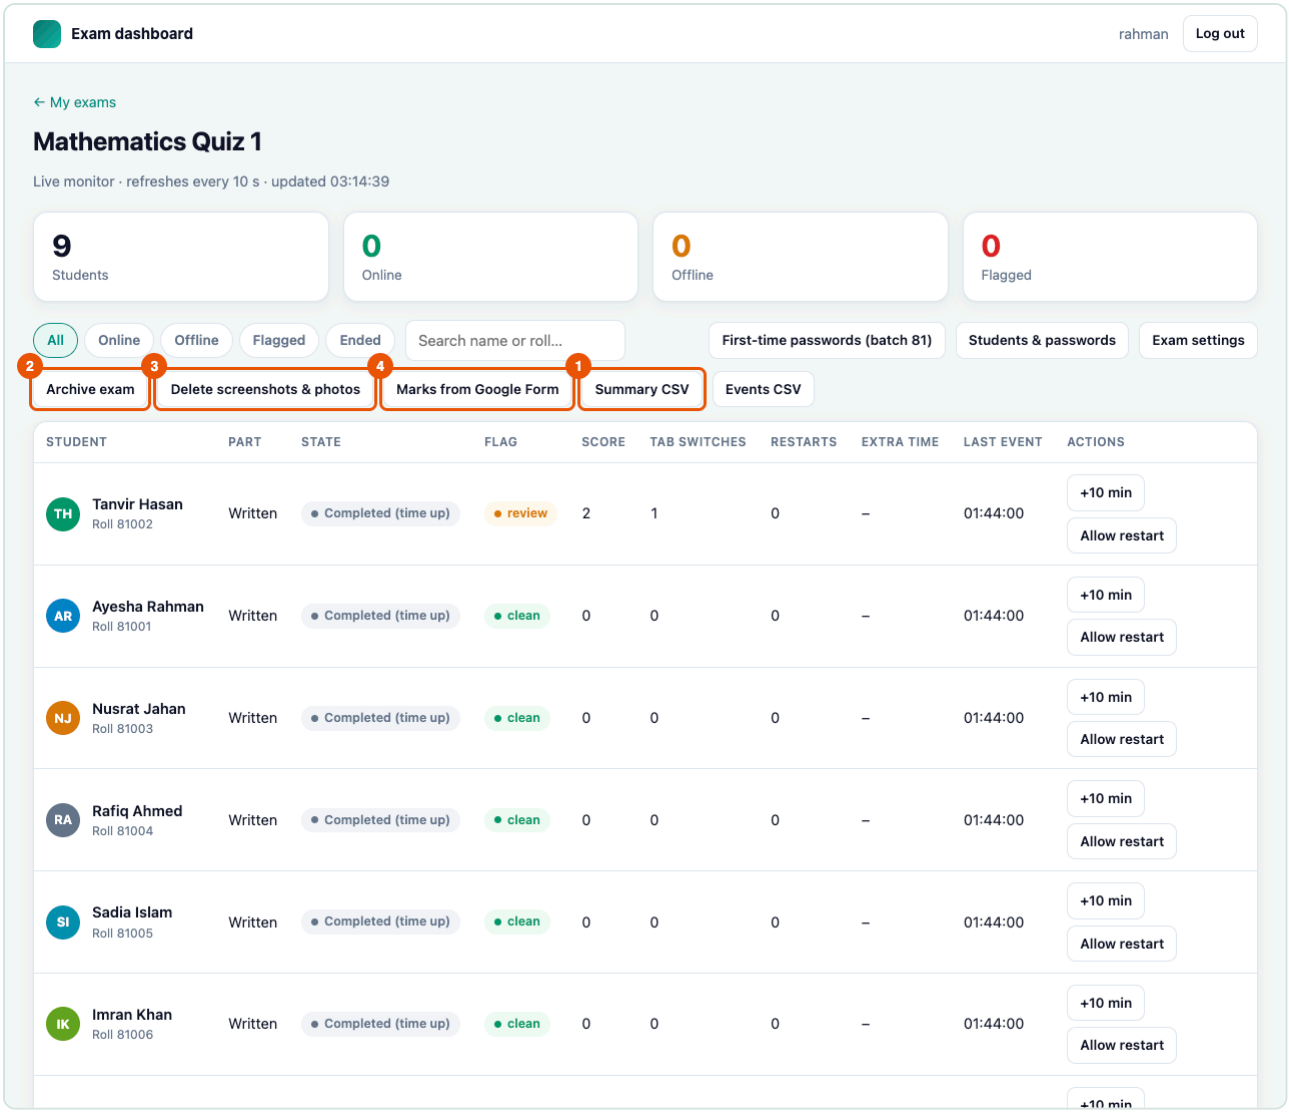

| Situation | Final mark |
|---|---|
| Finished normally | The form's own score |
| Quit the exam | **0** (the student is warned about this) |
| Ended by you | Blank: you decide |

| Situation | Final mark |
|---|---|
| No form submission found | Blank: you decide |
| Flagged | The form score, plus a note: *review before finalising* |
| Several submissions | The latest one is used, noted |

## Downloads

- **Summary CSV**: one row per student with score, flag and counts of each event.
- **Events CSV**: every recorded event in time order.
- Both open in Excel with Bangla and other non-English names intact.

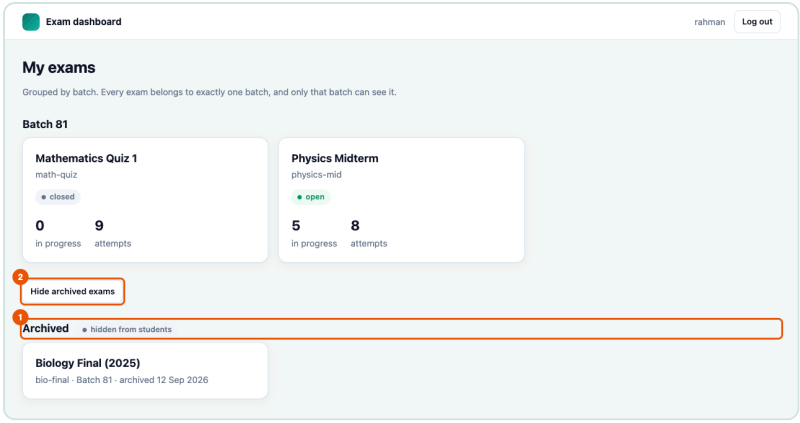

# Archive and clean up

The exam page after the exam

1. Summary CSV
2. **Archive exam**: hides it from students and the default list (you can unarchive)
3. **Delete screenshots & photos**
4. Marks from the Google Form

- **Archive** once marks are final. While the exam is still open, students in progress block archiving; after its end time, unfinished attempts are completed automatically.
- Archived exams stay readable: press **Show archived exams** on your exams page.

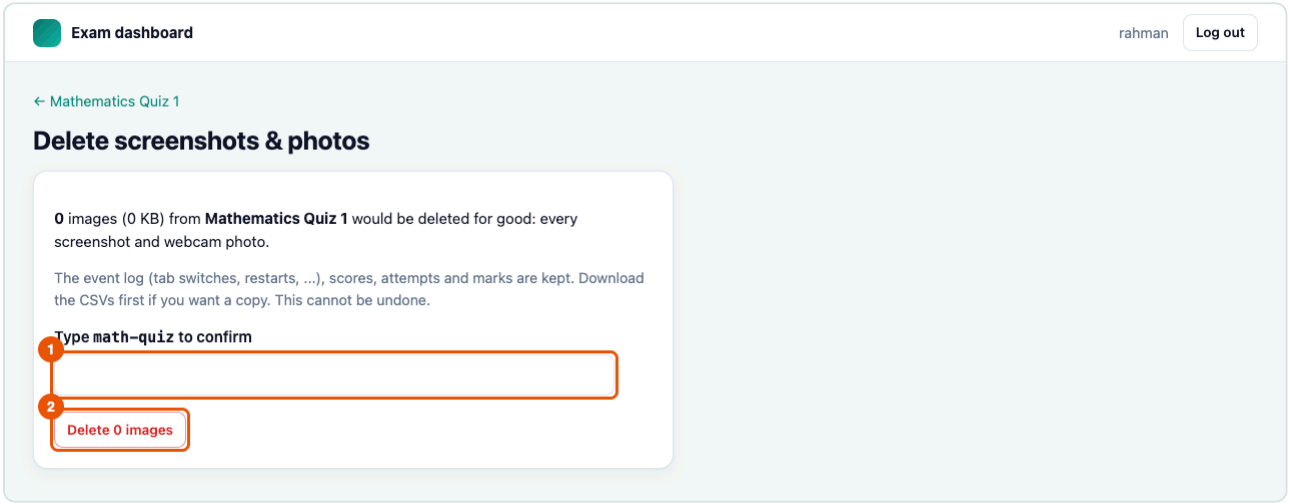

Archived exams

1. The archived section
2. Hide it again

## Delete screenshots and photos

Screenshots and webcam photos take the most space and are the most private. When you no longer need them, delete them for the exam:

Delete screenshots & photos

1. Type the exam id to confirm
2. Delete

- Allowed only after the exam has ended or been archived.
- **Cannot be undone.** The event log, scores, attempts and marks are kept.
- The administrator can also delete old images automatically after a retention period.

# 9 Questions and problems

| Problem | Answer |
|---|---|
| I cannot log in | Use the teacher address, not the admin one. Five wrong passwords lock you for 15 minutes. Ask the administrator to reset your password or to check you are a teacher. |
| I see no exams | An administrator must assign exams to you. |
| An exam shows *No batch set* | Ask the administrator to set its batch; students cannot see it until then. |
| A student sees no exam | Their batch must match the exam's batch. Check **Students & passwords**, then ask the administrator. |
| The page says my session expired | Log in again. |
| No screenshots for a student | Look for *Screenshot could not be taken* in their timeline: Screen Recording permission is off. They must enable it and restart the app. |
| Everything went quiet during the exam | If many students go offline together it is usually the network or the server. Their apps keep the data and send it when they reconnect. |
| A student's Google Form answers vanished after a crash | If the form requires sign-in, Google keeps a draft and they continue. Anonymous forms cannot recover answers. |
| I ended someone by mistake | Press **Allow restart**. |

# 10 Quick reference

## Exam day checklist

1. Settings checked (schedule, parts, monitoring, webcam). Saved.
2. Every student has a password. Slips handed out privately.
3. Students have the app and the permissions, and know the rules.
4. Open the live monitor. Filter to **Flagged** and **Offline** to focus.
5. Afterwards: marks, CSVs, archive, delete screenshots when no longer needed.

## Flags at a glance

| Flag | Score | Meaning |
|---|---|---|
| clean | 0 | Nothing recorded. |
| review | 1 to 4 | A little activity: look if you have time. |
| flagged | 5 or more | Look at the timeline before deciding. |

## Remember

- The flag never decides marks. You do.
- Quitting is final until you press **Allow restart**.
- Passwords are shown once.
- Extra time is per student; **Ends at** is for everyone.
